

## **CONGRATULATIONS CITY OF SAN FRANCISCO** **WATER DEPARTMENT**

This New Manitex 2892C has a capacity of 28 tons and 92 feet of main boom and with the 2 pc. Jib has a tip height of 148 feet! It was just what the City Of San Francisco needed when it was time to upgrade their boom truck. The Water department needed a crane with great lifting capacity and most importantly the optional Out and Down outrigger configuration for the tight confines of the city streets. They also added a Radio Remote control system and 2 person basket for future projects. They teamed the crane with a new Peterbilt tandem axle truck equipped with an Allison automatic transmission for ease of driving. The package met all of their expectations and more.
